SAFETY

Safety Nets

Sicor supply safety nets to markets throughout Europe, fulfilling a demand for a quality product. Every process that goes into manufacturing a finished safety net, even the border and tie ropes, is controlled by Sicor.

A Sicor safety net is a fine example of textile engineering with superb energy absorption and abrasion qualities, a net that a user can have total confidence in.

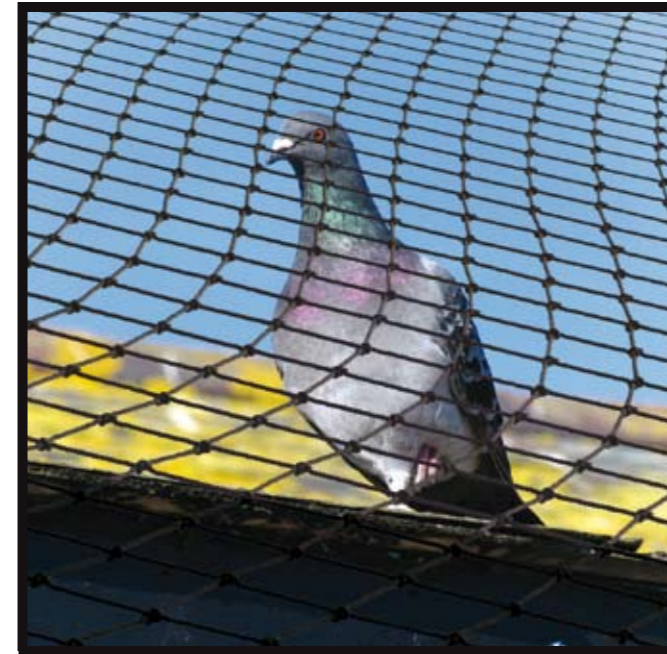

Safety nets can be manufactured to any size required and same day dispatches can be offered on stock sizes. All safety nets have test patches, and for fixing, tie ropes or grippers. Sales teams based in Bridport or Aberdeen will be pleased to answer any questions and ensure all customers requirements are accommodated.

POOL

Pool Safety Nets

The Sicor swimming pool safety net is specifically designed as a barrier to help protect children from exposed open water. Rather like a large tennis racket, the net is stretched over the pool and anchored with flush mounted fasteners. Swimming pools, spa's, split decks and rockeries present no difficulty as the Sicor net is shaped to suit the water feature. The netting is made from 4mm High Density Polyethylene Braid with UV stabilised inhibitors.

Bird Control Netting

All netting supplied by Sicor is manufactured in our own European factories to the highest specification. The netting has a particularly long life due to the high quality of raw materials used in its production. Bird netting bulk bales or finished nets can be supplied in any size with superb delivery times. Also Sicor offer a installation service that is tailored to your specific needs and requirements.

Sicor Bird Control Netting has excellent abrasion qualities, non absorption of water, chemically inert and unaffected by extreme hot and cold weather conditions.

Debris Netting

Sicor Debris Netting is manufactured from a high density Monofilament Polyethylene and warp knitted to the highest quality. Quick and easy to erect, the netting gives excellent protection to the public, workforce and transport from falling debris, tools and dust. It is especially effective in busy Town and City sites with a high volume of people and transport pass by the site.

Versatile

Effective in any application, especially so when wind forces can be a problem on scaffold erections. Debris Netting is wind permeable and unlike sheeting will reduce possible dangerous side loads on scaffold.

Lock Stitched

Special construction enables holes to be cut in the net if required without the material running. This becomes especially helpful if scaffold tubes need to be passed through the material.

Flame Retardant Bird Netting

Flame Retardant Bird Netting manufactured by Sicor with a 12/6 construction polyethylene twine, flame retardant and conforms to BS5867: part 2: 1980. Certificate of conformance supplied with each net.

Poultry netting, game bird netting, aviary netting is all supplied using appropriate materials and mesh size for the particular application. Can also be used as a superior alternative to plastic netting used as pond netting and garden netting used as a netting protection for fish ponds and fruit plantations.

Mesh Size	Bird Protection	Type	Pack
50mm(2")	Pigeon	12/6 Black	M ²
28mm(1-1/8")	Starling	12/6 Black	M ²
19mm(3/4")	Sparrow	12/6 Black	M ²
