LITTERCONTROL

LITTERCONTROL

Site litter control can be time consuming and costly. The Sicor Litter System offers effective litter entrapment, it is lightweight, easy to erect and environmentally sympathetic.

NETS

Litter Control

On average a site operator faces several days per year of lost revenue resulting from site closer brought about by high winds. Sicor offer an opportunity to minimise such losses with limited initial capital outlay.

The Sicor litter control systems have been designed by Structural Engineers with many years of experience in manufacturing and netting systems.

The simple netting system ensures that the operator can continue to receive waste even during extreme weather conditions.

On site installation is easy. The strong UV stabilised square mesh netting is held in place by epoxy coated steel poles slotted into ground based sockets.

- Efficient litter entrapment
- Environmentally sympathetic
- Easy to re-site and re-use
- Custom made to site requirements
- Cost effective
- Ideal for all landfill applications

The Sicor Tripod Fence

A highly stable, efficient and cost effective fence that can be erected over membrane without any material penetration.

The fence is portable and can be tailor made to overcome any litter protection problem.

- Efficient litter entrapment
- Environmentally sympathetic
- Easy to re-site and re-use
- Custom made to site requirements
- Cost effective
- Ideal for many landfill applications

SYSTEM

Litter Control Systems

Sicor's 'Foul Weather' Netting Enclosure

The unique design features make Sicor 'Foul Weather' netting enclosure the most effective system on the market. It is fully modular and its design allows it to be totally flexible on different ground conditions.

The system supplied is a modular Anti-Litter Defence System which offers a practical solution to the problem of tipping waste during high winds.

The system consists of masts and associated cantilever supports from which the net is rigged providing a minimum contained area of 400 square metres.

Mobile Litter System

The mobile litter system is mounted on runners, which allow it to be moved quickly and easily on site as operators progress.

The system allows all normal operations to continue unhindered without the problems normally associated with refuse sites.

Installing the mobile litter netting system gives site operators lower site maintenance costs by stopping litter spreading. Therefore this also reduces the problems caused by encouraging gulls into the area.

Mobile Post & Netting Fence

An extremely user friendly and cost effective solution to litter control. The fence is designed to be easily installed & relocated using fork attachments.

The anti litter netting itself is raised using a pulley and halyard system eliminating the dangers of working at height. Anti-litter fencing is a proven solution for the containment of litter.
